NOFFZ UTP SOLUTIONS FOR RF TESTING

The Internet of Things (IoT) is dramatically increasing the need for RF Test on a wide variety of devices. Automotive applications like eCall, Network Access Devices (NADs), connected Gateways, Radar Sensors, and Telematic Control Units (TCUs), as well as wireless applications in Smart Home or Wearables require high-performance Multi-DUT RF Testing. The NOFFZ UTP RF Test platform provides scalable and customized test systems for product validation and production.

Contact us directly to take advantage of our long-term RF Testing experience.

We optimize the quality and efficiency of your product development process with our individualized and highly-innovative test and measurement systems.

CUSTOMER APPLICATION EXAMPLES:

UTP 9010 RF EOL FOR TESTING
AUTOMOTIVE INFOTAINMENT AND
ECALL MODULES

Client: Harman/Becker Automotive Systems

Customer's quote (by Markus Krauss):

„We tested multiple wireless technologies ranging from Bluetooth to WiFi to GPS and cellular all with the same equipment using the NI Wireless Test System. The WTS and NOFFZ's RF test engineering expertise helped us significantly reduce test time and the time it took to get our test systems up and running.“

UTP 9085 IN-LINE-STATION FOR
MULTI-DUT FLASHING,
RF CALIBRATION & VERIFICATION

Client: peiker acustic

Customer's quote (by Enrique Gutierrez):

„Through faster measurements and lower capital cost, the NI Wireless Test System has allowed us to reduce our test costs by more than 25 %. We can test four devices in parallel, with three antenna ports each, using multiple wireless technologies ranging from LTE to WiFi to GPS all with the same equipment.“
